

# Partition lag skew — 700 messages/s

— Snapshot ratio — 15-sample rolling mean

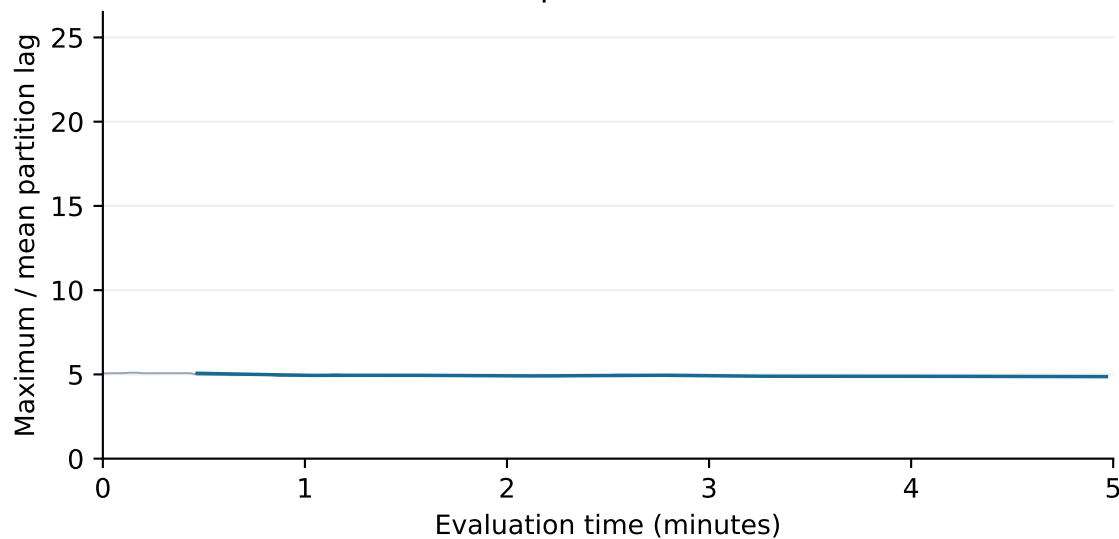

Keep 3 — Run 1

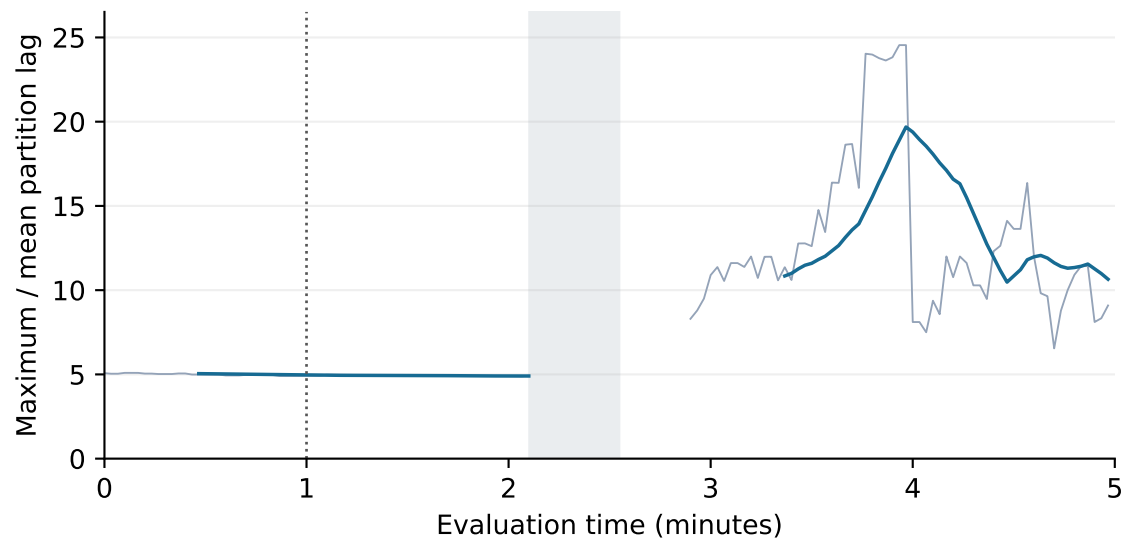

Scale 3 to 6 + redistribution — Run 1

Keep 3 — Run 2

Scale 3 to 6 + redistribution — Run 2

Common scales. Dotted line: scheduled scale request; shading: handoff coordination. Gaps remain unavailable. Interpret relative skew together with absolute lag and growth; a high ratio alone does not imply a large backlog.
