Before
Eval. end

Processing backlog (offsets)
Throughput (msg/s)
10-second intervals
Window p99 end-to-end latency (s)
30-second completion intervals
Evaluation time (min)

The dotted vertical line marks the scheduled action at minute 1; activation occurs later and differs between actions.
Throughput includes warm-up messages completed during evaluation. Window p99 uses evaluation messages completed in each interval.
Points are shown at interval ends; these window percentiles are not whole-run p99. Missing observations remain gaps. Drain is excluded.
