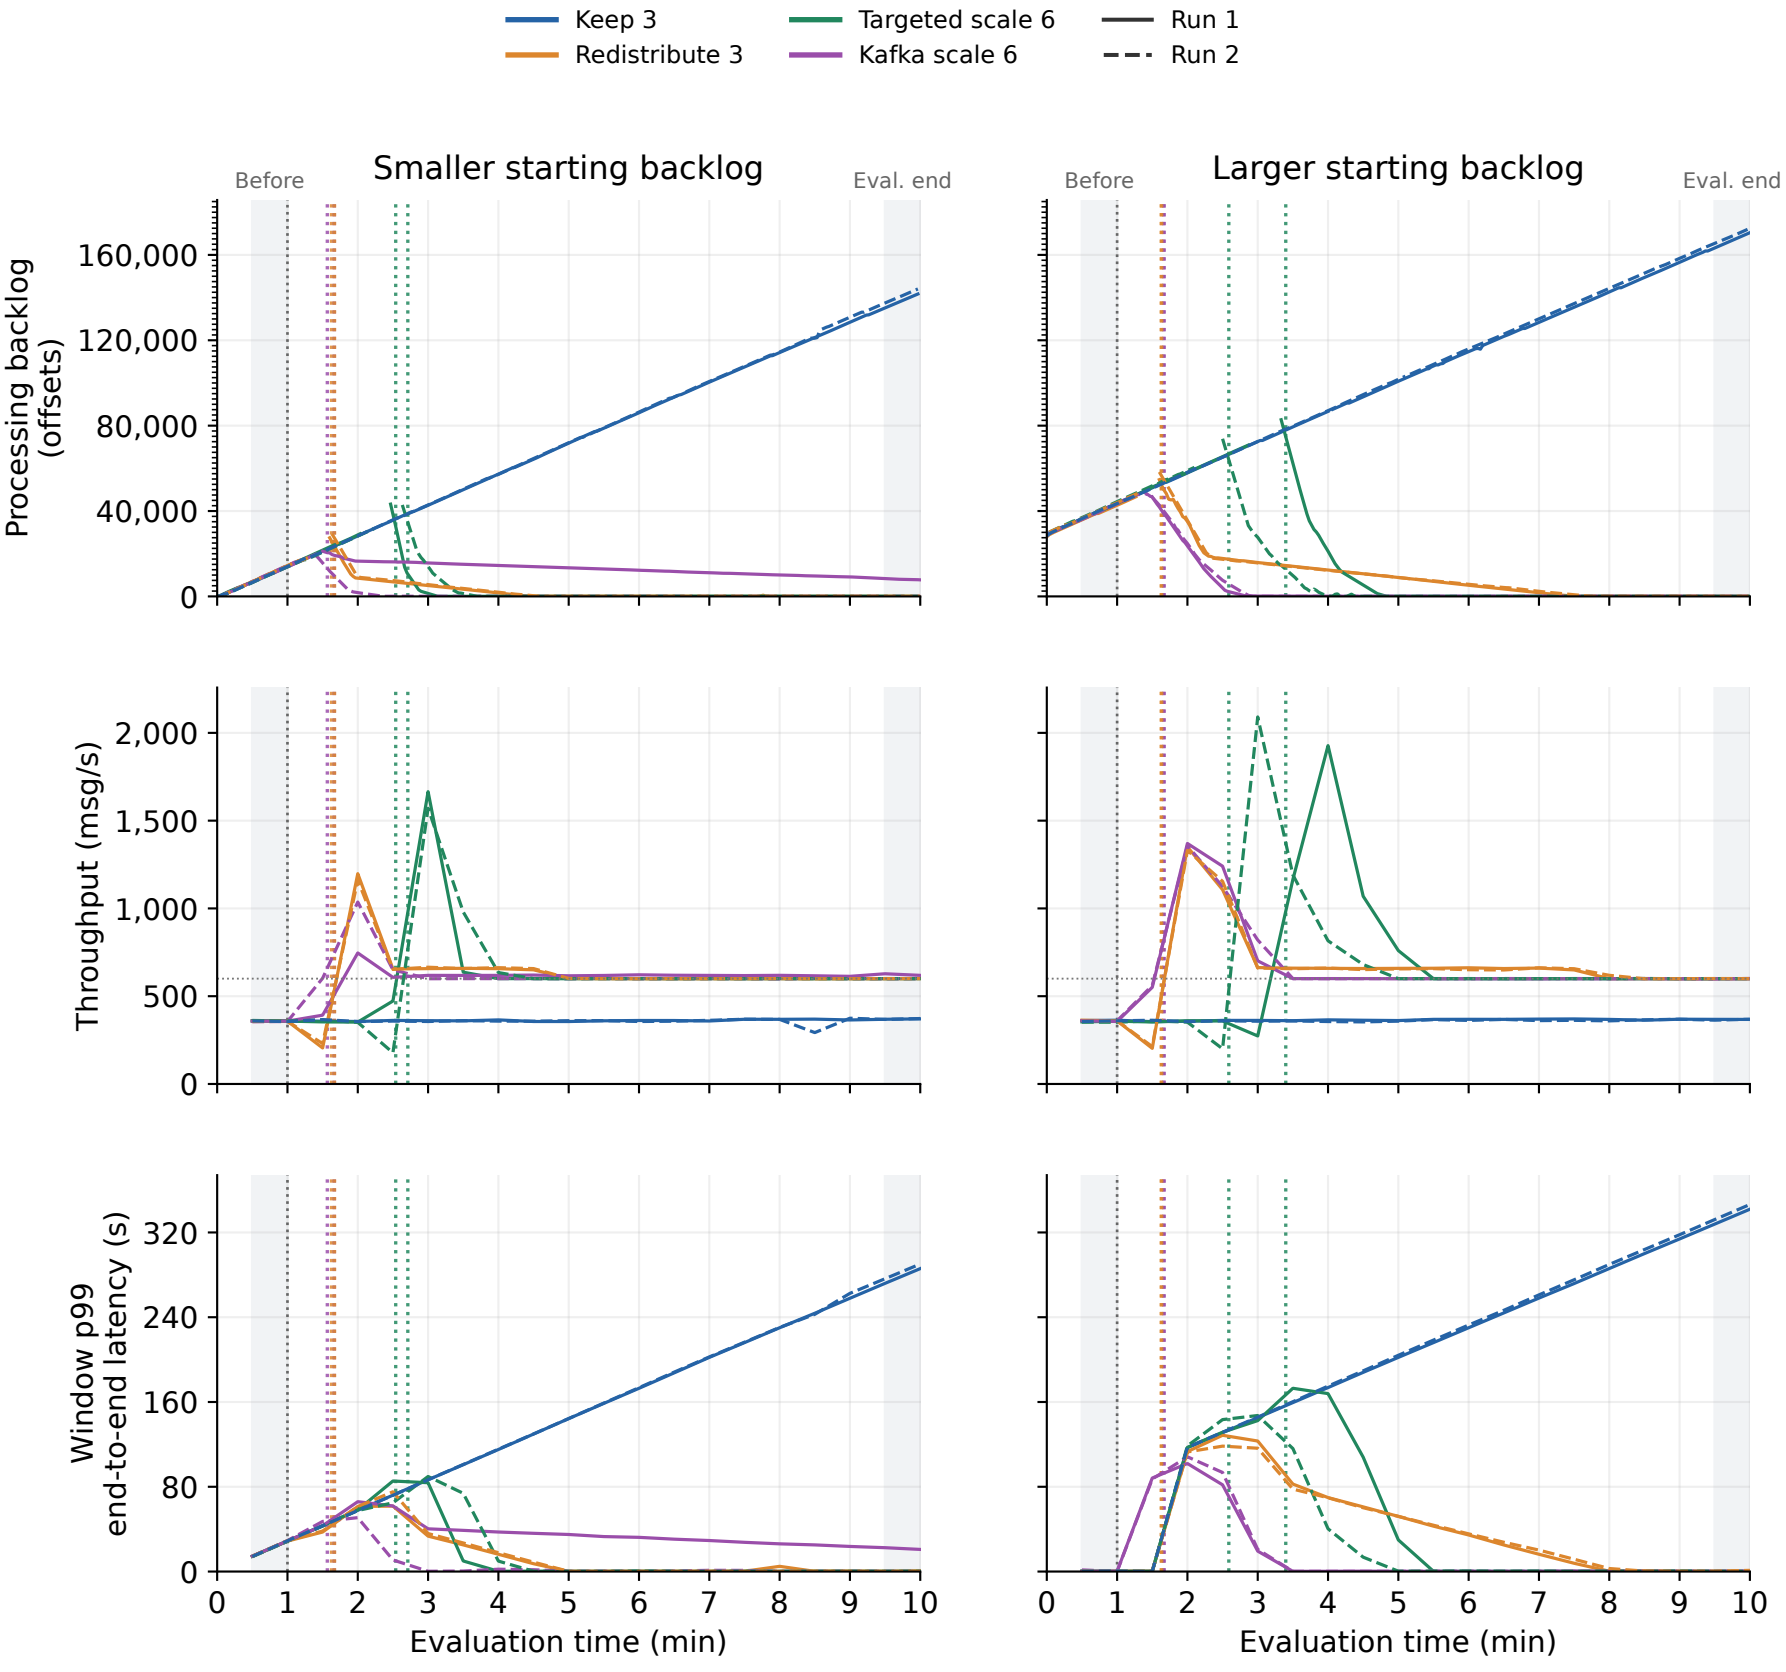
Performance Evaluation Metrics

12 high-input partitions | 600 messages/s during evaluation | 16 trials



Throughput: 30-second intervals. P99: evaluation messages completed within each 30-second interval.
Window p99 excludes drain and differs from whole-run p99; unfinished messages have no completed latency.
Dotted vertical lines: gray = request; colors = confirmed activation for each run. Shading: Before / Eval. end.
